

a substrate provided with pads of a driving wire to which pads of the tape carrier package is bonded, said tape carrier package being bonded onto the substrate.

Please **ADD** the following **new** claims.

12. (New) A tape carrier package, comprising:

a base film;

a plurality of output pads on said base film;

a slit between two of said output pads.

13. (New) A tape carrier package according to claim 11, wherein said base film includes polyimide.

14. (New) A tape carrier package according to claim 11, further including an input pad on said base film.

15. (New) A tape carrier package according to claim 11, further including an integrated circuit on said base film.

16. (New) A tape carrier package according to claim 11, wherein said base film is flexible.

17. (New) A display device, comprising:

a printed circuit board having an output signal conductor;

a substrate having a plurality of conductive lines; and

a tape carrier package including a base film, an input pad on said base film, a plurality of output pads on said base film, and a slit between two of said output pads;

wherein said input pad electrically connects to said output signal conductor, and wherein each of said plurality of output pads connects to an associated one of the conductive lines.

18. (New) A display device according to claim 16, wherein said printed circuit board and said substrate are arranged such that said tape carrier package is bent.

19. (New) A display device according to claim 16, wherein said printed circuit board and said substrate are arranged such that said tape carrier package is substantially straight.

20. (New) A display device according to claim 16, wherein said substrate includes glass.

21. (New) A display device according to claim 16, wherein said base film includes polyimide.

22. (New) A display device according to claim 16, further including an integrated circuit on said base film.

23. (New) A display device according to claim 16, wherein said base film is flexible.

24. (New) A display device according to claim 16, wherein said input pad connects to said output signal wire via an anisotropic conductive film.

25. (New) A display device according to claim 16, wherein said plurality of output pads connect to said plurality of lines via an anisotropic conductive film.

26. (New) A display device according to claim 16, further including a backlight irradiating said substrate.
